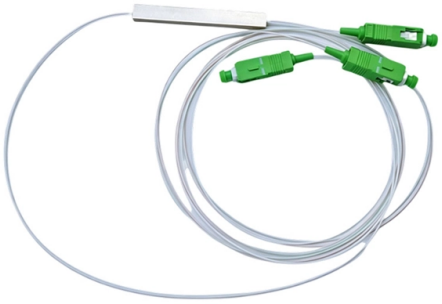
Do explosion-proof distribution boxes require annual inspection



Overview

You should check explosion proof enclosures at least once a year. You must follow rules for dangerous places. NEMA ratings help you choose the right enclosure:EX inspections verify that every junction box, light or motor installed in Zones 0-2 / 20-22 still meets its ATEX / IECEx protection rating. Initial → periodic → sample inspections catch corrosion, loose glands, non-Ex replacements and paperwork gaps—the very faults that ignite 30 % of industrial. Is a factory audit always necessary before placing an order?

Most procurement guides for explosion-proof distribution cabinets tell you to check the certificate and walk the factory floor. Every time a periodic inspection. The purpose of the periodic electrical installation inspection and of the selected equipment in hazardous areas is to check that it still complies with the technical requirements and safety regulations, as well as the prevention of gas and dust explosions.
