Fiber Optic Front LC Interface

Overview

LC connectors are a ubiquitous fiber optic interface, valued for their small footprint and superb optical performance. Originally called Lucent Connectors, after the company that developed them in the mid-1990s, LC connectors are now recognized by standards bodies like the TIA and. LC (Lucent Connector) is the world's dominant duplex optical interface, used across enterprise networks, telecom infrastructure, and especially data centers. Even as 400G/800G parallel-optics and MPO-based high-density solutions grow, LC remains essential for 10G/25G/50G/100G/200G/400G duplex. LC stands for a type of optical connector of which the full name is Lucent Connector. This guide dives into the engineering behind these compact connectors, their functionality, performance metrics, and applications across modern networks.
