Multi-channel parallel optical module fabrication

Overview

This paper studies the multi-channel digital Optical module based on PLCC packaging, and designs and manufactures a small 4-channel parallel receiving and emitting module. A multi-channel parallel optical communication module includes a casing having an airtight cavity, an optical communication assembly accommodated in the airtight cavity, and a temperature controller in thermal contact with the optical communication assembly. The problem of 10Gbps rate signal transmission on substrate with stamp holes is solved through high-speed Signal integrity. Parallel optic interfaces (POIs) are a fiber optic technology primarily targeted for short reach multimode fiber systems (typically less than 300 meters), and high data rates, 10 Gigabits per second (10G). POIs differ from traditional fiber optic communication in that data is simultaneously. Microscopic image of the fabricated monolithic multi-wavelength VCSEL array with uniform static performance (Left) and microscopic image of the VCEL-to-photodetector optical link (Right). The optical interfaces to the chip are provided by 16-channel photodiode (PD) and VCSEL. Multiple embedded parallel optic modules facilitate the need for dense optical interconnect technology at the card edge demarcation point.

Article Content

Multi-channel parallel optical communication module and optical ...

Abstract A multi-channel parallel optical communication module includes a casing having an airtight cavity, an optical communication assembly accommodated in the airtight cavity, and a temperature

Fabrication of multi-channel laser diode array module for parallel ...

The fabrication of multi-channel laser diode array module for parallel optical transmission was reported. The result showed an average coupling efficiency of 60% from the array module to the fiber optics.

Multi-channel optical module based on PLCC packaging

This paper studies the multi-channel digital Optical module based on PLCC packaging, and designs and manufactures a small 4-channel parallel receiving and emitting module. The problem of 10Gbps rate

Parallel direct laser writing method based on optical fiber array

This paper proposes a high-throughput nano-scale DLW technology based on an optical fiber array, which has the capability for parallel writing through multiple channels that can be

Parallel Optics

Since parallel optics relies on spatial division multiplexing, in which a signal is spatially divided among multiple fibers and simultaneously transmitted across those fibers, too much skew can result in bit

Multi-channel optical module based on PLCC packaging

The design and measurement of 40Gbps Very Short Reach (VSR) parallel optical transmission system are presented. The transmitter and receiver are implemented using Altera

VCSEL and Integration Techniques for Wavelength-Multiplexed

The construction of compact CWDM transmitters with small footprint and high bandwidth density requires an integration platform on which multi-wavele-ngth VCSEL arrays and multi-channel drivers

A Single-Chip CMOS-Based Parallel Optical Transceiver Capable of

Abstract—We report here on the design, fabrication, and high-speed performance of a parallel optical transceiver based on a single CMOS amplifier chip incorporating 16 transmitter and 16 receiver

© 2026 PROMETHEAS OPTICAL - All rights reserved

DESIGN AND PERFORMANCE OF EXPANDED BEAM, MULTI

Multiple embedded parallel optic modules facilitate the need for dense optical interconnect technology at the card edge demarcation point. With current architectures, this parallel optic demarcation occurs

Misalignment tolerance analysis and fabrication for highly efficient ...

Abstract A compact, highly efficient, and passively assembled parallel optical-electrical convertor module (POECM) for active optical cable application is proposed. This paper presents our

WO2016119115A1

A high speed optical module, and in particular, a multi-channel, single-mode, parallel transmission optical module in the field of optical communication is disclosed.

Packaging for a 40-channel parallel optical interconnection module

NTT is currently working on developing a high-throughput interconnection module that is both compact and cost effective. The technology being developed is called "parallel inter-board optical

High-speed multichannel parallel optical transceiver module based on ...

The BGA package-based high-speed multi-channel parallel optical transceiver module of any one of claims 1-4, wherein: the optical transceiver module has 24 optical transceiver channels, the signal

160-Gb/s Bidirectional Parallel Optical Transceiver Module for Board ...

We report here on the design, fabrication and high-speed performance of a novel parallel optical module with sixteen 10-Gb/s transmitter and receiver channels for a 160-Gb/s bidirectional

Multi-channel optical coupling between VCSEL arrays and multimode ...

We have successfully developed some new assembly techniques for the prototype ParaBIT module to provide the efficient and uniform multi-channel optical coupling between

Multi-channel parallel optical transceiver module

The present disclosure provides a multi-channel parallel optical transceiver module. The disclosed optical transceiver module/device may include a shell body and a circuit board located in the shell

LCC Series Parallel Optical Transceiver Module

© 2026 PROMETHEAS OPTICAL - All rights reserved

The LCC series parallel optical transceiver module is designed for short-distance high-speed data communication and parallel optical interconnects, such as

Multi-channel parallel optical receiving device

The optical signals are divided into multi-channel optical signals in parallel. The top surface of an output end of the arrayed waveguide grating is at a predetermined angle, causing the multi-channel optical
