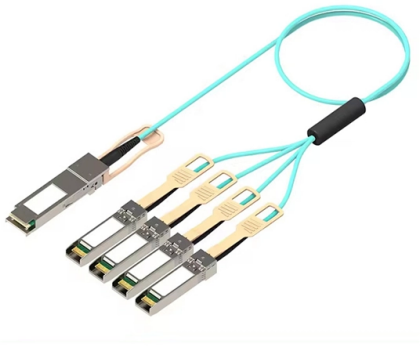
ODF Fiber Optic Patch Management System



Overview

Achieve successful cable management, handle high amounts of fiber cable and add density to fiber frames with the new DCX Optical Distribution Frame (ODF) System which features innovations like flippable cassettes, modular frame design and multiple configuration options. The fiber patch panel, also known as an optical distribution frame (ODF), plays a key role in terminating, distributing, and protecting optical fibers. With the rise of high-density data centers and FTTH systems, traditional ODF designs are being complemented by MPO/MTP-based fiber patch panels. This 2026 expert guide explains the functions, placement, structure, and application scenarios of ODFs and fiber patch panels-and includes a deep engineering FAQ that resolves real-world deployment challenges. It provides a centralized termination point where incoming fiber cables are spliced or connectorized and cross-connected to outgoing links.
