High-quality laser diode

Overview

High Output Laser Diodes Infrared high-power lasers deliver high peak output with pulse lighting, making them Ideal for use as light sources for distance measurement.

Key Takeaways

A high-quality laser diode is a semiconductor device that emits coherent, monochromatic, and well-directed light with stable output, high efficiency, and precise wavelength control.

Key Characteristics

Coherence and Monochromaticity: High-quality laser diodes produce light that is coherent, meaning the photons are in phase, and monochromatic, emitting a single wavelength. This ensures precise and focused beams suitable for optical communications, medical instruments, and scientific applications. Beam Quality and Directivity: The emitted light is highly directional, often with a narrow divergence angle, allowing efficient coupling into optical fibers or precise targeting in industrial applications.

Advanced designs like VCSELs and VECSELs provide excellent beam quality even at higher powers. Power and Efficiency: High-quality diodes maintain stable optical power output with minimal thermal degradation. Devices like slab-coupled optical waveguide lasers (SCOWLs) or high-brightness diode bars can generate watt-level outputs while preserving beam quality.

Wavelength Stability: The emission wavelength is determined by the semiconductor material and optical cavity design. High-quality diodes maintain consistent wavelength under varying temperatures and currents, which is critical for fiber-optic communications and spectroscopy. Durability and Thermal Management: Reliable laser diodes incorporate effective heat dissipation and are resistant to current spikes and static electricity.

Proper packaging and drive circuitry enhance longevity and prevent performance degradation.

Types of High-

Quality Laser DiodesSingle-Mode Diodes: Provide narrow linewidth and high coherence for precision tasks.

VCSE

Ls (Vertical-Cavity Surface-Emitting Lasers): Offer high beam quality and compact form factor.

VECSE

Ls (External-Cavity VCSELs): Combine high power with excellent beam quality.

High-

Brightness Diodes: Optimized for maximum radiance, suitable for pumping fiber lasers or industrial applications. ApplicationsHigh-quality laser diodes are used in fiber-optic communications, barcode scanners, medical devices, laser printing, industrial cutting, and scientific instrumentation, where precise, stable, and efficient light sources are essential. In summary, a high-quality laser diode is defined not just by its power output but by its coherence, beam quality, wavelength stability, efficiency, and reliability, making it suitable for demanding technological and industrial applications.

High Power Diode Lasers from 1.5 to 45 kW | LASERLINE

From beam generation to the workpiece, Laserline can offer industry-appropriate high-power diode lasers for material processing. Laserline''s high power lasers can achieve a standard laser power of

High Power Lasers Diodes (10W ~ 1kW)

Shop High Power Laser Diodes, 100 Watts to 1 kW Laser Bars & Stacks, All of the Top Brands -- Coherent, DILAS, Jenoptik, LUMICS on One Site -- LASER

High-Performance Laser Diodes for Industrial and Direct-Diode

Laser diodes with high reliability for industrial lasers and direct diode applications. Mounted on submounts, coolers, with integrated optics.

Laser Diode Product Finder | TOPTICA EAGLEYARD

Find the right laser diode by wavelength, power, package and other specifications with the TOPTICA EAGLEYARD Product Finder.

Laser Diode Selector

The laser diode selector allows you to specify the wavelength, power and package and download datasheets for a wide range of high quality laser diodes.

ROHM Develops a 1kW Class High Power Infrared Laser Diode

Building on these successes, we have developed a new 125W 8ch (1kW class) array-type product that meets the demand for a high output, high performance laser diode.

An Introduction to Laser Diodes

An Introduction to Laser Diodes Learn about the laser diode, including package types, applications, drive circuitry, and some laser diode

High Power Diode Lasers from 1.5 to 45 kW | LASERLINE

World-leading High Power Lasers Laserline''s high power lasers can achieve a standard laser power of up to 45 kW and an efficiency rate to over 50%. Meanwhile, in the power class of up to 4 kW, it is

Diode Laser Components | Coherent

Diode Laser Components Product Family Beam Shaped Modules Power applications as diverse as semiconductor wafer defect detection, wafer

Laser Diode Characteristics, Precautions for Use and Drive Circuit ...

© 2026 PROMETHEAS OPTICAL - All rights reserved

Laser diodes (LD) are semiconductor devices that convert electrical energy into high-power optical energy. These devices are currently used in the fields of telecommunications and

High-Power Broad-Area Lasers | Ferdinand-Braun-Institut

FBH develops tailor-made laser diodes (in single-emitter and bar configurations) for partners and customers in research and industry for the pumping of solid-state lasers and for direct applications in

High Power Laser Diodes

High Power Laser Diodes Our range of high-power laser diode products continues to increase. We offer both free-beam designs and fiber-coupled high-power laser

Diode Laser Modules, CW & Modulated | USA-Made Since 1969

High Precision Lasers (CK Series) The instrumental quality CK laser module is designed to specifically address the needs of high-end OEM applications requiring superior optical quality, ultra-stable

Infrared Laser Diodes | High Quality IR Laser Diodes

ProPhotonix offers a wide range of infrared IR laser diodes from a number of high-quality laser diode manufacturers including Ushio, QSI and Ondax.

Photonics Products: High-power Laser Diodes: Pump laser diodes

Laser diodes are efficient, narrowband, bright, and long-life, making them the ideal laser-pump source, and can be made to produce extremely high optical powers.

High Power Diode Laser

A high power diode laser is defined as a type of laser that is in demand for applications such as pumping solid state and fiber lasers, as well as direct material processing, and is characterized by high electro
