Fiber optic cable for dedicated lines

Overview

Fibre optic leased lines represent the modern standard for dedicated connections. A dedicated fiber line typically provides businesses with dedicated Internet access, delivering a private, high-speed connection through fiber-optic cables. Unlike shared networks that divide bandwidth and cause slowdowns, it guarantees consistent performance with symmetrical upload and download. A leased line is a dedicated, private connection that provides guaranteed bandwidth exclusively to one business, operating on a fibre-optic network with consistent speeds regardless of other users. This means the connection is not shared with other users, resulting in faster and more reliable speeds. Dedicated fiber internet is often used by businesses. An Active Optical Network (AON) is a point-to-point network architecture where individual dedicated fibers connect directly from a central hub (like an ISP's central office) to each end-user.

Article Content

What is a dedicated fiber line?

A dedicated fiber line delivers private, high-speed Internet with low latency and symmetrical speeds, ideal for businesses needing reliable connectivity.

Shared vs. Dedicated Fiber: What You Need to Know

What Is Dedicated Fiber Internet? Dedicated fiber internet is a type of internet service that uses fiber optic cables to provide a dedicated and exclusive
