# LC interface jumper connection

## Overview

Field-mountable connectors Field-mountable optical fiber connectors are used to join optical fiber jumper cables that contain one single-mode fiber.

## Key Takeaways

LC interface jumpers connect fiber optic devices using small-form-factor duplex or simplex connectors, ensuring high-density, low-loss optical links.

## Overview of L

C JumpersLC (Lucent Connector) jumpers are small-form-factor fiber optic patch cords used to connect network devices, transceivers, or patch panels. They feature a 1.25 mm ceramic ferrule and a compact duplex housing, allowing high port density in data centers and enterprise networks.

L

C jumpers are available in single-mode (OS1/OS2) and multimode (OM1–OM5) variants, and in simplex (single fiber) or duplex (two fibers) formats.

## Types of LC Jumpers

Standard LC-LC Duplex Jumper: Commonly used for connecting SFP/SFP+ modules or patch panels. Provides reliable mechanical latching and repeatable optical alignment.

## LC Behind-the-

Wall (BTW) Jumper: Shorter connectors for 0.9 mm buffered fiber, used for internal equipment wiring or tight-clearance terminations. Single-mode vs Multimode: Single-mode jumpers are used for long-distance links, while multimode jumpers are suitable for shorter distances within LANs or data centers. Polish Types: UPC (blue housing) for low back reflection, APC (green housing) for angled connections minimizing return loss.

## Connection Principles

Device Port Connection: Insert the LC connector into the SFP/SFP+ or patch panel port until the latch clicks. Ensure the connector is aligned and fully seated. Routing and Slack Management: Route the jumper through cable management trays, maintaining a minimum bend radius of 400 mm to prevent fiber damage.

Avoid using flanges to join two jumpers. Excess fiber should be coiled neatly and secured with bundling tape. Compatibility: LC connectors are standardized, so jumpers from different manufacturers will mate reliably if compliant with TIA/EIA-604 intermateability standards.

Maintenance: Keep connectors clean and free of dust. Use dust caps when not connected to prevent signal loss or damage.

## Practical Tips

Use duplex jumpers for bidirectional communication and simplex for single-direction links. Match fiber type and polish to the equipment requirements.

## UPC to UP

C, APC to APC. Avoid sharp bends or excessive tension to maintain low insertion loss and high signal integrity.

L

C jumpers are ideal for high-density racks, SFP modules, and QSFP+ connections, supporting speeds up to 40GbE or 100GbE. By following these guidelines, LC interface jumpers provide reliable, high-performance optical connections in enterprise, telecom, and data center networks.
