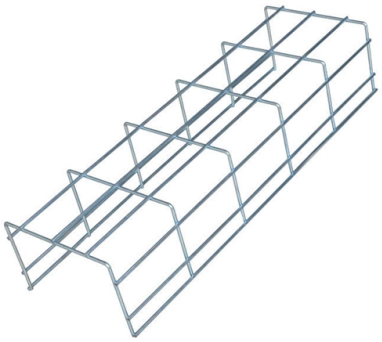
Optical Modulator Test System



Overview

Advanced visual signal analysis using constellation, spectral plots and eye diagrams, plus an extensive list of numerical parameters including EVM, BER, bias errors and more. Characterize 400G-ZR, 800G-ZR and signals up to 140GBaud with 70GHz of OMA system bandwidth. Keysight XP7-class optical modulation analyzers include the N4391C. Featuring full bandwidth upgradability, you can keep pace with your roadmap in the evolution of symbol rate. Keysight XP7-class optical modulation analyzers (OMAs) combine a high-bandwidth real-time oscilloscope and coherent optical receiver to enable detailed insights into complex, high-speed modulation formats increasingly used in next-generation data communication systems. These products support. With the market-leading performance of Quantifi Photonics' IQRX coherent receiver and the scalable architecture of Tektronix's high-performing oscilloscopes, you'll get the most out of your investment. Depending on specimen parameter, there are different setups available.
