RF Optical Amplifier Experiment Report

Overview

We report on the design and characterization of a high-power amplifier with an output power of 36. The amplifier is optimized for driving acousto-optic and electro-optic modulators for ultracold atom experiments. 5 dBm over a frequency range of 20 MHz to 1000 MHz with a. Operational amplifiers, also known as op-amps are high gain DC and AC signal amplifiers which have a range of uses and can be configured in ways to exhibit specific behaviours such as voltage adders and differential amplifiers. As seen in figure 2, op-amps are 3 terminal devices, with an inverting. Our goal with this project is to transmit multiple, high bandwidth signals over a fiber optic cable with low signal degradation. To help illustrate how our circuit will achieve this goal, we created a block diagram that breaks our project down into its major components. A sinusoidal input signal of 0 VPP and frequency 1 kHz was applied using a function generator.

Article Content

High-power RF amplifier for ultracold atom experiments

We report on the design and characterization of a high-power amplifier with an output power of 36.5 dBm for a fre-quency range of 50 MHz to 1000 MHz with a total gain of 40 dB. The

High-Power RF Amplifier for Ultracold Atom Experiments

This project presents the design and characterization of a high-power RF amplifier optimized for driving acousto-optic (AO) and electro-optic (EO) modulators used in ultracold atom experiments.

AMPLIFIERS REPORT

Different power amplifier circuits will be constructed, to compare differences in performance and investigate the effects of feedback to correct defects. Furthermore, the effects of measuring

High Bandwidth RF Over Fiber Optics

Our goal with this project is to transmit multiple, high bandwidth signals over a fiber optic cable with low signal degradation. To help illustrate how our circuit will achieve this goal, we created a block

LAB REPORT PHY547: EXPERIMENT 5 ON OPERATIONAL

The experimental results obtained from the three op-amp configurations aligned well with theoretical predictions when analyzed using the respective gain formulas, taking into account

EXPERIMENT NO.(4) Operational Amplifiers

EXPERIMENT NO.(4) Operational Amplifiers OBJECT: To study the basic characteristics an applications of the operational amplifiers.

Experimental Performance evaluation of RF over Fiber Optic Channel

Abstract: This paper characterizes the effect of RF over Fiber Optic (RFoF) Channel for long distance transmission of QPSK modulated RF signal at L Band. QPSK modulated signal ranging from 10

A COMPREHENSIVE REVIEW OF RF AMPLIFIER

This review paper covers a comprehensive analysis and comparative study of RF Power Amplifier design with the advent of future technology and supplies knowledge of different types of RF Amplifier,

Operational Amplifier Lab Experiment | PDF

This lab experiment examines the applications and limitations of operational amplifiers (op-amps). Students will build inverting and non-inverting amplifier

OPTI 380B Intermediate Optics Laboratory Lab 4: Introduction to ...

Lab 4: Introduction to Operational Amplifiers Objective: he characteristics of operational amplifiers Basics of how to hook up and use op amps. Voltage amplifiers (inverting and non-inverting). The

Lab 9: Exploring Operational Amplifiers in ENEE 3518

ENEE 3518 EXPERIMENT OPERATIONAL AMPLIFIERS Purpose: The purpose of this lab is to demonstrate how the operational amplifier is used in practical

Laboratory Manual

The optical fiber is a medium which carries this energy to the receiver. At the receiver, light is converted back into electrical form with the same pattern as originally fed to the transmitter. Transmitter: Fiber

Experiment No. 7 Optical Fiber Receiver

Procedure 1. Connect the amplifier circuit shown in Fig.(3) on the Optical Fiber Trainer "OPF". The circuit consists of the trans-impedance amplifier, a voltage reference, and a reverse biased

Performance Evaluation of Optical Amplifiers in a Hybrid RoF-WDM ...

Their experimental results showed a stable RF transmission test in about 1007 km optical fibre. In order to have even better-quality networks, the implementation of hybrid RoF and WDM systems have

Objectives Introduction

The amplifier is inverting with the feedback loop closed. The closed-loop gain is solely determined by the feedback resistors Rf and Ri assuming that the loop gain – defined as the product of the open-loop

Lab Report 6.docx

THEORY & DIAGRAMS Transistor amplifiers are commonly used in applications such as RF (radio frequency), audio, and OFC (optical fiber

Lab 3 Operational Amplifiers 2

Lab Objectives This lab will familiarize you with the properties and operations of operational amplifiers. In this lab we will use the TLC277 operational amplifier to implement several different practical

Operational Amplifier Lab Report 02

This laboratory report describes an experiment using an operational amplifier (op-amp) circuit with a UA741 op-amp. The report outlines the learning outcomes,
