High-Density Fiber Optic Patch Cord Solution

Overview

Utilizing MPO (Multi-fiber Push-On) connector technology, this patch cord supports 12 to 144 fiber cores, delivering high-density cabling, low insertion loss, and exceptional stability. As networks move to higher speeds and higher density, choosing the right fiber optic patch cords becomes critical to the reliability of your system. The panels will enable Cisco's customers to facilitate breakout connectivity agnostic of the data rate. Its core feature is the ability to simultaneously transmit multiple optical signals through a. In high-density optical interconnect scenarios within data centers, it typically refers to Fiber Shuffle. At its core, a Fiber Shuffle solution remaps optical fibers that are arranged in one predefined order into another, according to a different routing rule.
